

# Polyester Heaters - Hi-Heat Industries, Inc.

## Polyester Etched or Wire Wound Heaters

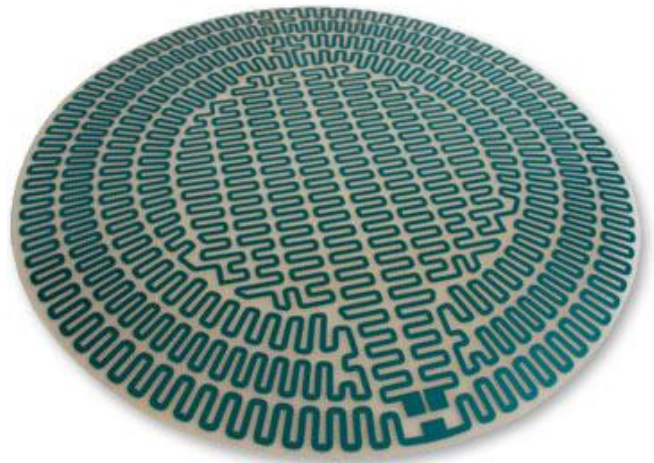

The polyester heater is a great way to reduce cost in comparison to large format silicone heaters. These units are water resistant and very durable. Polyester units are used in low temperature applications up to 200°F. The polyester heater can be designed with an adhesive backing, notches, control measures, an insulative backing and many other options.

### Factory Specifications

Contact factory for specific application questions.

- Up to 240 volts
- Low profile
- UL recognition upon request
- Custom Design
- Minimal out gassing
- Mounting options
- Safe and reliable
